

Our test Menu includes:

1. Andrology Testing
 - a. Comprehensive Semen Analysis
 - b. Retrograde Semen Analysis
 - c. Post Vasectomy Check
 - d. Sperm DNA Fragmentation
 - e. Sperm Wash for IUI
 - f. Sperm Freeze & Storage for post Chemotherapy
2. Immunology Testing
 - a. Auto Immune
 - i. Anti Phospholipids Antibodies Panel (APA)
 - ii. Anti Nuclear Antibodies Panel (ANA)
 - iii. Anti Thyroid Antibodies Panel (ATA)
 - iv. Anti Ovary Antibodies (AOA)
 - v. Embryo Toxicity Assay (ETA)
 - b. Flow Cytometer
 - i. Reproductive Immuno-Phenotype (RIPh)
 - ii. Natural Killer Cell Activation assay with suppression (NKa)
 - c. Infectious Disease
 - i. ToRCH Panel
 - ii. Acute Hepatitis Panel
 - iii. Hepatitis B Panel
 - iv. HIV 1 & 2 plus O
 - v. RPR
 - vi. Chlamydia & Gonorrhea by Nucleic Acid Testing (NAT)
3. Genetic testing
 - a. Thrombophilia Panel (9 Loci)
 - b. Vascular Endothelial Growth Factor (VEGF)
 - c. P53 Codon 72 Polymorphism (Arg/Pro)
 - d. Progesterone Receptor (3 Loci)
 - e. Human Leukocyte Antigen G (HLA-G)
 - f. Human Leukocyte Antigen DQ α (HLA-DQ α)
4. Hematology Testing
 - a. Comprehensive Metabolic Panel (CMP)
 - b. Lipid Panel
 - c. Complete Blood Count with auto Differential (CBC with Diff)
 - d. Endocrine Hormones
 - e. Coagulation
 - i. PT, aPTT
 - ii. Lupus Anticoagulant

We work with Physicians to help couples become parents

We cherish life and the creation of life. We recognize and respect the dreams and special needs of fertility patients in creating a new life and becoming a family.

We are a highly specialized high complexity clinical fertility laboratory offering immunological and genetic tests that are not available in general laboratories, in addition to general laboratory work ups. We offer specialized fertility tests and procedures to help physicians assist their infertility patients in achieving their goal of building a family.

We offer a complete Andrology services laboratory, including but not limited to procedures such as sperm wash, sperm cryopreservation, as well as semen analysis and sperm function tests. We also perform sperm identifications for testicular and epididymal aspirates.

We offer very specialized FDA Reproductive donor screening testing that conforms and adheres to the FDA guidelines enacted in May 2005 for donors of human cells, tissues and tissue-based products (HCT/Ps).

Our facility is CAP accredited, CLIA certified and FDA registered. To eliminate medical errors, we installed a state of the art Lab Information System (LIS) that is capable of receiving orders online from the physician's office, distributing the test orders to the different analyzers, and then posting the test results online or by fax. It then initiates the bill without ANY human intervention. This is part of our Green philosophy at FCS, and allows us to be an essentially paperless office.

We believe in redundancy of test equipment and infrastructures. To insure consistent results of tests and procedures performed in our facility, we have a backup generator and a central uninterrupted power supply system (UPS). We maintain a backup for medical gases with automatic transfer switches. We monitor our refrigerators 24hours/day, 7days/week, and 52 weeks/year to ensure our media and reagents are maintained at their optimum storage temperatures.

Each of our staff members is board certified in their respective discipline, regularly participates in continuing education programs to maintain their certification and participates regularly in proficiency testing. Our staff has a collective experience of 85 years in clinical diagnostics.

All of these measures are taken to provide the most accurate test results in a timely manner in order to fulfill our goal to work with physicians to help couples become parents.
